Installing and Activating the Theme

In your WordPress admin under the “Appearance” tab, select “Themes”. Then click on the “Install Themes” tab at the top of the page. Next, select the “Upload” option. Browse to and select your Pure Theme .zip file and press the “Install Now” button.

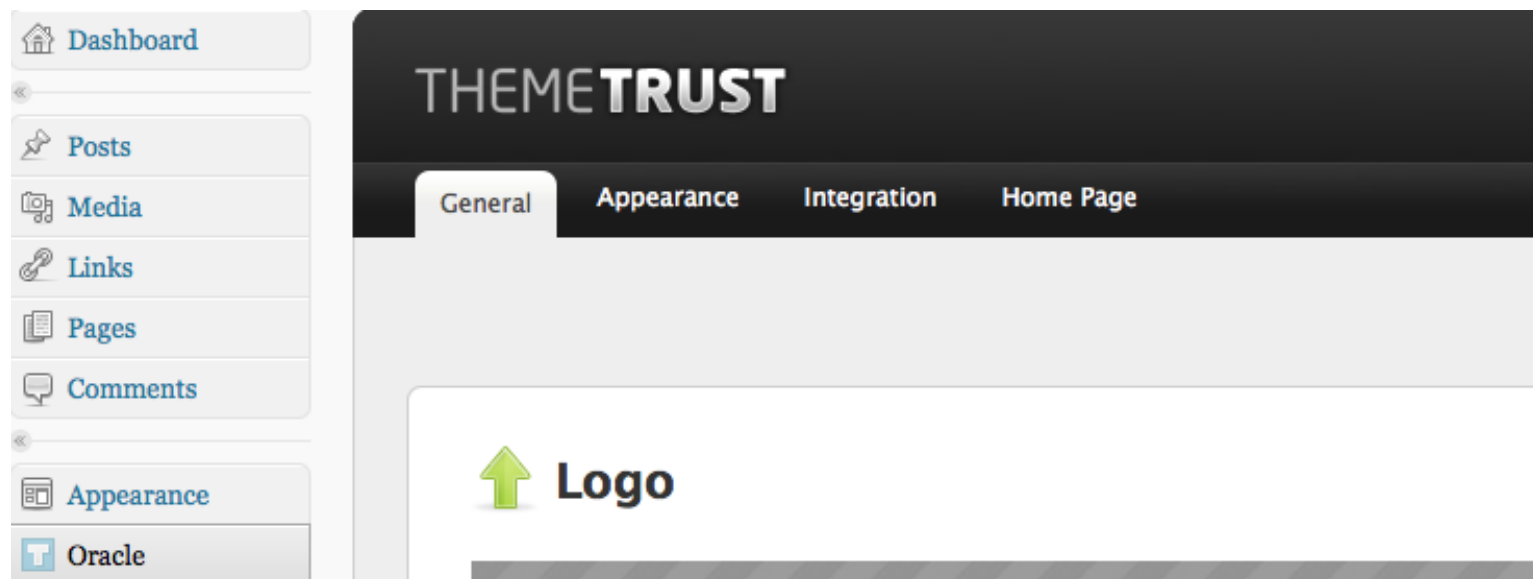

After the theme .zip file has finished uploading, you should be presented with three options. Select the “Activate” option.

Theme Options

In your WordPress admin, click on the “Oracle” tab located in the left menu. Here you can configure a number of options to taylor the theme to fit your needs.

General

Logo: Upload your own personal logo. If no logo is uploaded, your website’s name will be displayed in plain text.

Custom CSS: Add your own custom styles.

Footer Text: Edit the footer text. Add your own copyright info, links, etc.

Appearance

Color: Use the built-in color picker to set your own color scheme.

Integration

Analytics: Enter your custom analytics code. (e.g. Google Analytics).

Feed: Enter your Feedburner RSS URL and Feedburner Email Sign Up URL for easy feed integration.

Header Banner Ad: Insert your ad code here for a 468 x 60 header banner.

Home Page

Recent Posts: Set the size styling and number of recent posts to show on the home page.

Featured Categories: Enter the categories you want to feature on the home page and the number of posts to show for each.

30 Inspiring Website Navigation Menus <http://t.co/7Q8lge0> 8 days ago

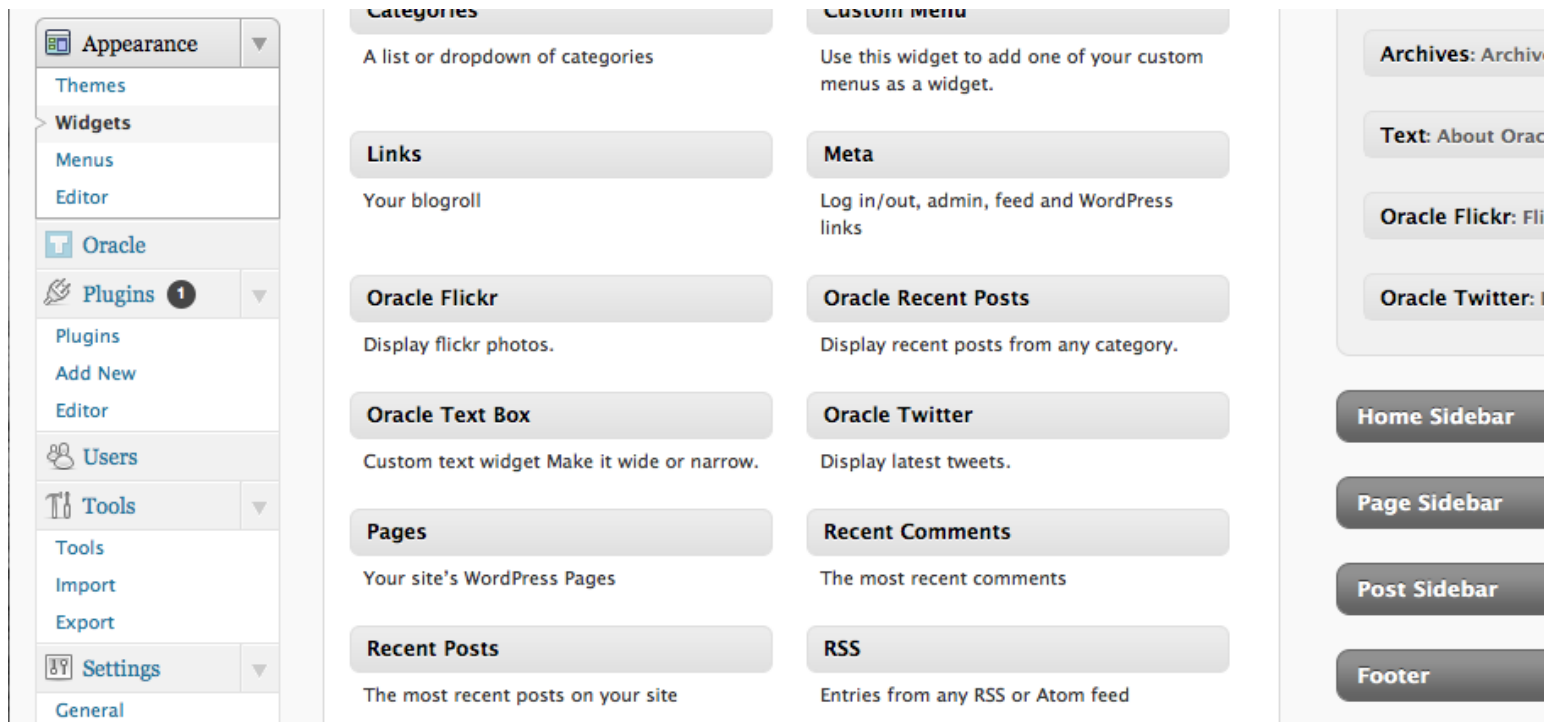

Creating the Main Menu

In your WordPress admin, click on “Menus”, which is located under the “Appearance” tab on the left. Start by creating a new menu in the panel on the right. Once the new menu is created you can add pages, categories, and custom links from the panels on the left. You can then re-order and create submenus by dragging the menu items. When you’re finished, click the “Save Menu” button.

The screenshot shows the WordPress 'Menus' administration interface. On the left, there are two panels: 'Theme Locations' and 'Custom Links'. The 'Theme Locations' panel shows 'Main Navigation Menu' selected with 'Main Nav' as the location, and a 'Save' button. The 'Custom Links' panel has input fields for 'URL' (http://) and 'Label' (Menu Item), with an 'Add to Menu' button. On the right, the 'Main Nav' menu editor is active. It shows the menu name 'Main Nav' and a checkbox for 'Automatically add new top-level pages'. Below this, there are four menu items: 'Home' (CUSTOM), 'About' (PAGE), 'Meet the Team' (PAGE), and 'News' (CATEGORY). A 'Delete Menu' link and a 'Save Menu' button are also visible.

Adding Widgets

This theme has several custom widgets and a number of widgetized areas in which you can use them. To add widgets, click on “Widgets” under the “Appearance” tab in your WordPress admin. Click and drag a widget to one of the boxes on the right. Then set your options for that widget.

Oracle Flickr: Display your recent Flickr photos.

Oracle Twitter: Display your most recent tweets.

Using Button Shortcodes

You can add beautiful buttons to the content of any page, post, or widget using the following shortcode:

```
[button url="http://themetrust.com/quantum/" target="_blank" label="Learn More"]
```

The button shortcode takes 3 parameters: url, target, and label.
